

XVoice alarm system with Mobile Phone

The XVoice alarm system is a cheap and easy-to-use possibility for users, whom want to increase the safety of their house, summer house, car, boat, without involvement of special security company or they simple want to add the mobile call possibility to their existing system.

The system is working with normal mobile terminals (see the list below), without restriction for the operator.

As the user can decide, that the call is taken or not, so with a simple refill, the system can work to one year. This is the main cost of the operation, as the power consumption is very low.

If you want to change the called number, you can do during less than 5 minutes. Also easy, if you need to change the phone due to the defect or malfunction of the terminals. You not need to use exactly same for as the replacement. It is enough if similar phone selected from the list below, which compatible with the given alarm panel. The whole change is only few minutes.

The main purpose of the system is a quiet alarm for the owner, via the mobile phone – as you can use 2 different phone numbers -, but of course you can connect local syren or activator.

You can provide uninterrupted power source from external battery. In this case, any power outage generate an alarm call, and during the call the hardware provide a special sound via the phone, which shows to the called user, that the problem related to power supply.

In case of normal alarm, no sound given.

You can find in the table below, which kind of terminals can use for the equipment. For all of that we provide the necessary headset.

* Sign in the panel or in the chassy

** As we have not a possibility to test all type of phone, so the usability of the terminal based on the information, provided by the manufacturer.

On top of the terminal selection above, the user needs to decide in advance the time, between the call events, which consists both phone call. This can be 5, 10 or 20 minutes, as you can see in the picture also. The relevant delay in these case is 1, 2 or 4 minutes. You have this period to leave the guarded area, before any alarm. After few call cycle, the period extended. The few function and interface ensure the easy usage.

The price of the base panel is only 20 EUR.
